WikiSoc Page: PmWiki/PmWiki

PmWiki is a wiki-based system for collaborative creation and maintenance of websites.

PmWiki pages look and act like normal web pages, except they have an "Edit" link that makes it easy to modify existing pages at can be left open to the public or restricted to small groups of authors.

## **Key PmWiki Features**

**Custom look-and-feel**: A site administrator can quickly change the appearance and functions of a PmWiki site by using differen **Access control**: PmWiki password protection can be applied to an entire site, to groups of pages, or to individual pages. Passw

**Customization and plugin architecture**: One principle of the <a href="PmWikiPhilosophy">PmWikiPhilosophy</a> is to only include essential features in the core using extensions (called "recipes") that are available from the PmWiki <a href="Cookbook">Cookbook</a>.

PmWiki is written in PHP and distributed under the General Public License. It is designed to be simple to install, customize, and
